for a single advertisement is one third of a page. Please include a donation to cover the cost of such
advertisements - about \$10 for this size.

JUNE - It's time for planting fruit trees, roses and deciduous trees.

Fruit Trees: Careful site selection and preparation greatly enhance fruit tree productivity. Soil type drainage, shade and shelter are considerations when choosing a planting site. Tolerance of different trees to these factors dictates where each should be planted.

Apricots, peaches, figs, nectarines and almonds prefer warm situations with plenty of sun and well-drained soils. Sites that become waterlogged should be avoided to prevent root rot.

Cool climate crops, such as apples, pears, quinces, plums and persimmons will tolerate wetter, colder and more shady situations.

Citrus prefer well drained soils, full sun, protection from strong winds and plenty of summer water.

CJ's have stocks of all these trees. If there is anything special you would like to plant don't hesitate to ask!

There is still time for planting your winter crops of broccoli, cabbage, cauliflowers, onions, peas and broad beans.
